- ✓ *Saliva Diagnostics made Simple.*

Let's have an intelligent conversation about the mouth-body connection. Gone unchecked harmful oral bacteria and their toxins naturally accumulate in the mouth. Here, they easily enter and are allowed to move through the bloodstream with far reaching and catastrophic effects on the heart, arteries, central nervous system, and more. Brushing, flossing, and regular cleanings often aren't enough.

Periodontal disease (also known as gum disease) is the most undiagnosed & untreated disease with the highest impact to so many bodily systems and functions. Periodontal disease decreases your ability to fight infection and inflammation.

SimplyPERIO™ testing, utilizing noninvasive saliva analysis, provides the data-supported insights necessary for you and your dentist to stop and even reverse the progression of disease.

Molecular Testing By Alimetric CLIA #: 01D2113023
